Answer to the question no: 2

I strongly believe that battery-powered rickshaws should not be allowed to operate on the roads of Dhaka.

Firstly, they contribute significantly to traffic jam in the city. They move slowly and take up road space. This makes the already crowded roads more crowded, especially during peak hours.

Secondly, they create road safety problems because some drivers do not follow traffic rules properly. Sudden turns, stops, and reckless driving can increase the risk of accidents.

Another concern is that these vehicles require frequent charging, which creates additional pressure on the electricity supply.

Furthermore, the large number of these vehicles makes traffic management more difficult. Their unregulated movement can disrupt

the normal flow of traffic. They can also make narrow roads and busy roads more difficult to use. Dhaka already has limited road space and severe traffic problems. So, allowing more battery powered rickshaws can worsen the transportation situation.

For all these reasons, I strongly oppose allowing battery powered rickshaws to operate on the roads of Dhaka.
