Focus Writing and Critical Writing

What is Focus Writing?

Focus Writing means **describing** a single idea or topic. The point is to stay strictly on topic without unnecessary details. It **explores** and **explains** one event very precisely.

What is Critical Writing?

Critical Writing is **deeper** — it means **analyzing, evaluating, and questioning** what you are writing about. Instead of just describing facts, you **make judgments, compare ideas, point out strengths and weaknesses, and build your own opinion**.

Example of Focus Writing: Renewable energy in Bangladesh

Example of Critical Writing: Barriers to Meet Renewable Energy Targets in Bangladesh

Focus writing = Zooming in on **what is happening**. Stay sharp and on-topic.

Critical writing = Digging into **why it's happening** and **how it could be different or better**.

Critical Writing is Extended Version of Focus Writing

IBA-MBA Preparation for Beginners
Public group · 20.0K members

Do

- Plan before writing — outline what you want to say
- Introduction, Body, Conclusion
- Stay on topic — stick closely to your main idea
- Use clear and simple language
- Support points with specific details (Charts, statistics, numeric information – Use reference)
- Organize logically — make sure each paragraph flows from one to the next

Don't

- Don't write in a single paragraph.
- Don't wander into unrelated ideas
- Don't use vague language
- Don't overstuff with too many points at once
- Don't forget the main idea — every paragraph should connect back to it
- Avoid spelling mistake & grammatical error

Focus Writing Practice

- The impact of social media on the youth of Bangladesh.
- Remittance support on the rural economy of Bangladesh.
- The role of banking in Bangladesh's economic development.
- The significance of CSR (Corporate Social Responsibility) in Bangladeshi companies.
- Microcredit to help in poverty reduction in Bangladesh
- The opportunities and threats of AI in Bangladesh
- Environmental pollution and its effect on urban life in Bangladesh
- The causes and consequences of traffic congestion in Dhaka city
- The significance of the July uprising in Bangladesh's political history
- The importance of reformation in Bangladesh's education sector
- The prospects of renewable energy in Bangladesh
- The contribution of the RMG (Ready-Made Garments) sector to the national economy
- Bangladesh's challenges after graduating from LDC (Least Developed Country) status
- Women empowerment to changing the social structure of Bangladesh
- The importance of attracting FDI (Foreign Direct Investment) for Bangladesh's economy

Critical Writing Practice

- Critically analyze the role of social media in shaping political opinions in Bangladesh.
- Evaluate whether remittance can sustain long-term economic growth for Bangladesh.
- Analyze the strengths and weaknesses of the banking sector in Bangladesh.
- Discuss the effectiveness of CSR activities by Bangladeshi corporations in real social change.
- Critically examine the impact of microcredit on women's economic independence in Bangladesh.
- Evaluate the readiness of Bangladesh for adopting Artificial Intelligence (AI) on a large scale.
- Critically analyze the government's role in protecting the environment in Bangladesh.
- Evaluate the existing solutions to traffic problems in Dhaka and their effectiveness.
- Critically discuss the political significance of the July uprising in Bangladesh's history.
- Analyze whether current reformation movements are enough to meet Bangladesh's future needs.
- Assess the challenges Bangladesh faces in shifting to renewable energy sources.
- Critically examine whether the growth of the RMG sector is sustainable for Bangladesh.
- Discuss the challenges and opportunities for Bangladesh after its LDC graduation.
- Analyze how true women empowerment is in rural vs. urban Bangladesh.
- Critically discuss whether FDI policies in Bangladesh are attractive and effective for foreign investors.

Example: **Renewable energy in Bangladesh/ Why is Renewable energy important for Bangladesh?**

Renewable energy in Bangladesh is a sector with room to grow. Renewable Energy (RE): Renewable energy (RE) comprises of energy from the sun (directly), usually called solar, biomass, wind, tidal, geothermal and hydro. The endowment of these resources will determine how much of each form of renewable energy source can be exploited in a country.

Tidal is a new form of energy source that is yet to achieve commercialization. It thus leaves solar, wind and biomass as the only current options. In the case of Bangladesh, the principal barriers with **biomass** are; the price is high and collecting large quantities is difficult, hence expensive. The **wind** potential in Bangladesh, especially onshore, is limited, which makes it a problematic resource to evaluate. **Solar** energy is the single most dependable RE resource that can be resourced on a large scale. This expectation is turning out to be true with local and foreign investments.

According to **the Bangladesh Power Development Board (BPDB), as of January 2022, Bangladesh had 22,066 MW of grid-connected installed capacity,** the fuel wise breakdown of which is shown in graph. **RE consists of only 2.08 percent** of the total installed capacity connected to the grid; half of that, ie., **1.04 percent is hydropower**. A large portion of the claimed **543 MW solar power** is off-grid solar, grid-tied **solar parks only contributes 196 MW**. It is worth pointing out that, as a result of the extension of rural electrification through the expansion of the grid, a large portion of the Solar PV Home Systems that brought so much fame to Bangladesh is lying idle. As expected, RE in Bangladesh is dominated by solar with other sources being very small in comparison.

As of 2022, Bangladesh is among the top 6 global economies by annual GDP growth, according to the World Bank. To satisfy its energy consumption needs, the country currently relies mainly on natural gas and biofuels. It is clear that Bangladesh is struggling to increase the share of RE in its energy mix. The future of RE in Bangladesh also does not look very bright, unless the government takes steps to explore new and innovative ways of harnessing RE.

Example: **Barriers to Meet Renewable Energy Targets in Bangladesh**

Bangladesh, despite its commendable economic growth and increasing energy demands, is struggling to incorporate renewable energy (RE) into its national grid. **Although the country has immense potential in solar energy and some scope for wind and biomass, renewable sources account for only 2.08% of the total installed energy capacity as of January 2022.** This figure reveals a critical gap between ambition and implementation.

One of the most pressing barriers is the over-reliance on fossil fuels, especially natural gas, which continues to dominate the energy mix. Although solar power has been the most promising RE source, its expansion is hampered by land scarcity, bureaucratic delays, and **lack of efficient policy incentives**. Many Solar Home Systems that once helped electrify rural areas **have become obsolete** due to grid expansion, leaving valuable infrastructure underutilized.

Biomass, while abundant in rural Bangladesh, **faces challenges** such as high costs and logistical difficulties in large-scale collection. Wind energy, especially onshore, **suffers from** weak and inconsistent wind patterns, making it unreliable and hard to scale.

Moreover**, institutional inefficiency and weak coordination among government agencies hinder progress**. Projects often face delays in approvals, inconsistent policy frameworks, and inadequate financial incentives for private investors. Despite increasing interest from both local and foreign investors, the regulatory uncertainty discourages sustained investment.

Another major concern is the lack of innovation and R&D support. Bangladesh has yet to explore newer technologies such as tidal and geothermal energy. Without strategic investment in innovation, the country risks falling further behind in its RE goals.

In conclusion, while Bangladesh's potential in renewable energy is undeniable, realizing this potential requires a holistic shift in planning, governance, and infrastructure development. Without proactive measures—such as policy reform, investment incentives, and public-private collaboration—the country may continue to miss its renewable energy targets, putting both its environmental sustainability and energy security at risk.

Thematic Writing

Thematic writing is a type of **paragraph or composition** writing where set of **keywords** are given and it is required to write a coherent and relevant paragraph by incorporating all the provided words meaningfully.

Example: Write a paragraph using the following words (You can't change/ you may change their form where necessary):

Climate	Emission	Atmosphere	Carbon	Global
Pollution	Environment	Temperature	Consequence	Energy

Group by Md Mahmud
IBA-MBA Preparation for Beginners
Public group · 20.0K members

Do

- Plan before writing — outline what you want to say
- Must give a title. Stay on topic

- **Composition:** Introduction, Body, Conclusion (If it contains 15 marks and above)
- **Paragraph:** If it contains 10 marks
- Use the keywords as instructed

- Use clear and simple language

Don't

- Don't wander into unrelated ideas

- Don't write immediately. Read the question carefully.

- Don't use vague language
- Don't overstuff with information
- Avoid spelling mistake & grammatical error

Example: Write a paragraph using the following words (You can't change/ you may change their form where necessary):

Climate	Emission	Atmosphere	Carbon	Global
Pollution	Environment	Temperature	Consequence	Energy

The Greenhouse Effect

The greenhouse effect is one of the most alarming threats to our planet's environment today. It occurs when heat from the sun gets trapped in the Earth's **atmosphere** due to the excessive **emission** of greenhouse gases, especially **carbon** dioxide. This trapped heat causes a gradual rise in the Earth's **temperature**, which in turn affects the global **climate**. Rising temperatures lead to severe **consequences** like melting glaciers, rising sea levels, unpredictable weather patterns, and more frequent natural disasters. Human activities such as burning fossil fuels for **energy**, deforestation, and industrial **pollution** have accelerated this process. If these practices continue, the **global** community may face food shortages, water crises, and massive displacement of people. One major consequence already visible is the increased frequency of heat waves and droughts. To tackle this issue, governments and individuals must work together. We need to reduce emissions, adopt clean energy

Argumentative Writing

Argumentative writing **presents a clear position** on a controversial issue, **supports/denies** it with logical reasoning, evidence, and examples, and addresses opposing viewpoints. The goal is to **persuade the reader to agree** with the writer's stance.

- Taking a side (like a debate)
- Giving strong reason, clear evidence/ information to convince the reader

IBA-MBA Preparation for Beginners
Public group · 20.0K members

Do

- Plan before writing — outline what you want to say
- State your side strongly at beginning of the discussion
- Make your point clear, Why you support / why you don't support the statement
- Link your supportive points (Firstly, Secondly, To begin with, On the other hand, Moreover, Furthermore etc)

Don't

- Don't wander into unrelated ideas
- Don't stand in the mid-point
- Don't put your eyes on the topic that you don't support
- No title needed
- Don't overstuff with information
- Avoid spelling mistake & grammatical error

Example: **"Some consider that keeping our localities clean is the responsibility of the Government, while others consider it to be the responsibility of the individual citizens." Discuss. (IBA, BBA: 2016)**

The statement that whether or not keeping our surroundings clean is the responsibility of the Government is a very controversial one. **However, in my term of view, I think this is the responsibility of the Government. Reasons behind my stance are following below.**

Firstly, the government can easily ensure efficient waste disposal mechanism which is connected to every household. **For instance,** each house needs to have an easy access to litter bins and they must be cleaned by the public body easily 2 to 3 times every day. **Secondly,** the government has more power than individuals in tackling the issue. They can, for example, set up law that bans the emission of wastes from industries into the air and water courses. **Moreover,** it is easy for the government to make people aware of the importance of cleanliness. For example, importance of cleanliness can spread to the masses by the media, by adding lessons in curriculum and textbooks of educational institutions and by arranging programs on how people are effected by malaria, dengue, diarrhea and other diseases caused by living in an unhygienic surroundings. **Furthermore.** it is the government responsibilities to tackle such kind of activities by imposing punishments.

However, some people believe that it is the responsibility of the individual citizens to keep our localities clean. As it is the problem of attitude of the citizens, so individual citizens are responsible to keep their environment clean. **Finally,** if individual citizens do not cooperate with the government agency in dealing this issue, the government cannot tackle this alone.

In conclusion, I strongly agree with the statement that the government is the responsible to keep clean our surroundings and opine that the topic is highly propitious for our present as well as future generation provided we take sensible precautionary measures to limit the adverse consequences

Argumentative Writing Practice

- "Is Social Media Doing More Harm than Good in Bangladesh?"
- "Should the Government Ban Student Politics in Public Universities?"
- "Is Microcredit a Sustainable Tool for Poverty Reduction in Bangladesh?"
- "Does the Current Education System in Bangladesh Need an Overhaul?"
- "Should the Government Invest More in Renewable Energy Than Fossil Fuels?"
- "Can Foreign Direct Investment (FDI) Truly Benefit the Local Economy?"
- "Is AI a Threat or a Boon for Bangladesh's Job Market?"
- "Is Traffic Congestion in Dhaka a Result of Poor Urban Planning?"
- "Is Women Empowerment in Bangladesh More Symbolic than Practical?"
- "Is the RMG Sector Exploiting Workers or Enabling Economic Growth?"
- "Should English Be Mandatory in All Levels of Education in Bangladesh?"
- "Is Bangladesh Ready to Graduate from LDC Status?"
- "Should the Use of Social Safety Net Programs Be Expanded in Bangladesh?"
- "Can Digital Bangladesh Truly Bridge the Rural-Urban Divide?"
- "Should Bangladesh Prioritize Export Diversification Over RMG Dependency?"

Amplification

Amplification writing takes a short, simple idea—often a **proverb, phrase, or saying**—and **expands and explains** it in detail with **examples, illustrations, comparisons, and logic**. The aim is to deepen the reader's understanding of the original idea.

- Expanding a short quote or proverb into a full paragraph by giving examples and explanations.

Example: **"Unity is strength."**

The proverb "Unity is Strength" **emphasizes** the powerful impact of staying united in any situation. When individuals come together with a common purpose, they can overcome great obstacles that would be impossible to tackle alone. This idea is clearly reflected in nature—birds flying in flocks or ants working together to build their colonies show how unity ensures survival and success. In human society, families, communities, and nations thrive when people cooperate and support one another. For example, during the Liberation War of Bangladesh in 1971, people from all walks of life united for independence, and their unity led to victory against a much stronger enemy. **Similarly,** in the workplace or in times of crisis, a united team can accomplish more than a divided one. Disunity weakens strength, causes conflict, and leads to failure. On the other hand, unity encourages peace, harmony, and progress. **Therefore,** whether in a family, a society, or a country, unity plays a vital role in achieving goals and maintaining stability. In every sphere of life, this proverb teaches us that we are always stronger together than we are alone.
